126	Submitted	NASA	Stephanie	Anders	11/19/2001	11/19/2001	hydrography		Content	Under review.	<p>added: In keeping with our answer to Stephanie Anders at NASA I think it is necessary to make a couple of changes to the hysurwbd table and attributes. Since we determined that rivers per se do not belong in the water body table then we should remove wild and scenic rivers from the body_typ_d. These are already included in the strm_typ_d. Incidentally, we should also include recreation river in this domain.</p> <p>Also, under water bodies. Does the perman_d apply? I would think they only apply to streams and rivers - unless there is a need to have a classification for intermittant or dry lakes or ponds, I would suggest that it be deleted from this table. We also have up_riv_mil and dn_riv-mil in the water body table. Shouldn't this too be moved to the water course table?</p> <p>Under water course we have trop_typ_d. The definition reads "A descriptor of the trophic type of the water course" It's actually</p>

However, In SDSFIE, the following water related Entities are Red (which will be corrected): 1.Surface water body area 2.Surface water course area; 3.Shoreline buffer critical area;</p>	<p>specific symbology ( I think he means color symbology) exist?? Does RSIP and other Navy GISs have a symbology?? Is there one for the Corps, Army, Navy, Air Force, etc. How does the color symbology of the CADD surveying and mapping standards fit with the SDS color mapping symbology? Suggest Dr. Dan and Steve develop a spreadsheet of the different color schemes for GIS map monitor display and hard copy map printing. They may not be the same. Bobby can provide something from the Navy. Tony Vajda/Linda Smith Greg Kuester from Aberdeen and/or Will Martin at Bragg can provide something from the Army. Blaze can provide something and Nancy has one for MVD and National Guard. Bryan can get something from the Air Force. Let's see if there are trends. IS all the surface water blue?? //From Bobby C. - Dr Dan - Can you check the water related Entity Types in the SDSFIE to make sure they are designated as a shade of "blue"? If not, please make a list of the ones</p>

220	Submitted	MCAS Cherry Point, NC	Denise	Smith	10/28/2002	10/28/2002	boundary		Content		This was a response to the following information that I had provided: I found the following information concerning monument tables in a Bureau of Land Management book: A brass cap is securely fastened to the top of the monument post. Brass tablets are supplied for placing in rock outcrop and for imbedding in concrete monuments. The tablet is 3-1/4" in diameter and has a stem 3-1/2" long. The top bears the same official inscription as that of the cap of the iron monument post. A tablet is a type of inscribed brass cap which can be imbedded in a rock outcrop or poured concrete monument.

Cherry Point provided a reply, which is included under "comment". Incorporated into Release 2.22.	Filename: EADDOCS1-#10197-v1-SDS_REQUEST_FOR_UTHCSE XP.XLS. I have a question on this one. The SDSFIE currently contains a "heat_cool_fitting_point" (table uthcsfit). We could add "Expansion Joint" to the list of discriminated domain values for a fitting. Would this satisfy your requirement, or would you prefer to add a new entity type for "heat_cool_expansion_joint" (new table - uthcsexp)?

251	Submitted	CH2M Hill	Matt	Anderson	8/6/2002		fauna		Content	Forwarded to Laurel on 8/06/02.	My comments - The domain table "haz_type_d" is not related to "bird or deer strike hazard areas". These areas are where there is a likelihood of a bird striking an aircraft (and possibly contributing to a crash), or where a deer is likely to cross the road and possibly collide with an automobile. Please check on the following question. Looks like they are correct in the wrong SDSFIE Domain table being referenced. See if we need to create a new Domain table for incorporation in the next SDSFIE/FMSFIE release.
